```python
import random

number = random.randint(1,9)
guess = 0
count = 0

while guess != number and guess != "exit":
    guess = input("What's your guess? \n")

    if guess == "exit":
        break
    guess = int(guess)
    count += 1

    if guess < number:
        print("Too low!")
    elif guess > number:
        print("Too high!")
    else:
        print("You got it!")
print("And it only took you",count,"tries!")
```
